Skills

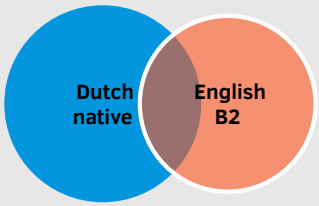

Programming

Java

C# • Kotlin

HTML • CSS • JS/TS

Languages

Profile

Enthusiastic Associate degree ICT student with over seven years of programming experience and a strong interest in Java and backend development. Experience with software architecture, automated testing and CI/CD, gained through personal projects and open-source collaboration. Additionally, some experience with C# and .NET.

Education

Sep 2023 - Present — **Associate degree ICT** — Fontys ICT, Eindhoven
Associate degree in ICT, focusing on software development and applying what I learn in practical projects.

Sep 2021 - Jun 2023 — **Software Developer (MBO level 4)** — Summa College, Eindhoven
Completed the programme in an accelerated track, finishing in one and a half years through a differentiated class.

Hobbies

2023 - Present — **Photography & Videography** — Instagram/tijsbeek_nl
Started photographing in 2023, and currently often at music venue De Pul in Uden. Videography also sparked my interest, and I am currently working on a documentary series about the history of Scouting Uotha.

Feb 2019 - Present — **Programming** — GitHub/Tais993
Been programming since February 2019, at this point for over 7 years. What started as a hobby has grown into my biggest interest and the career I want to pursue.

2012 - Present — **Scouting Uotha** — Scouting Uotha
Since 2012 been involved wiht Scouting Uotha. I'm now in my fourth year as a leader for the Cubs (ages 7–11), organising and supervising activities.

Work Experience

Jul 2025 - Present — **Attraction Attendant** — The Chocolate Factory, Noordkade
Working part-time as an attraction attendant.

Apr 2023 - Aug 2023 — **Full-stack Developer** — Sidekix
Worked for five months as a full-stack software developer, gaining experience developing applications.

Feb 2022 - Jun 2022 — **Software Developer (internship)** — Vanderlande, Veghel
Java CI/CD DevOps
During my internship, I worked on an internal Java application supporting the software release process, focused on CI/CD and DevOps.

Jan 2021 - Jul 2025 — **Delivery Driver** — Kwalitaria, Uden
Worked part-time as a delivery driver.

Technologies

Java

Jackson, Caffeine, SLF4J, Logback, Log4j

C#

.NET 10, ASP.NET Core, WPF, Razor Pages, Npgsql

Spring

Spring Boot, Spring Web/MVC, Reactor, Spring REST Docs

Databases

PostgreSQL, MongoDB, SQL, JPA, Hibernate, Spring Data JPA, Flyway

Testing

JUnit, NUnit, xUnit, Mockito, Moq, Testcontainers, MockMvc

Code Quality

SonarQube, JaCoCo, Codecov

Architecture & APIs

REST

DevOps & CI/CD

Docker, Docker Compose, GitHub Actions, Bamboo

Build Management

Gradle, Maven, MSBuild, NuGet

Version Control

Git, GitHub, GitLab, Bitbucket

IDEs & Tools

IntelliJ IDEA, Rider, PhpStorm, Visual Studio, ReSharper

Documentation

Markdown, AsciiDoc, Javadoc, C4 Model

Project Management

Jira, GitHub Issues, Trello

Communication

Slack, MS Teams, MS Outlook

Projects

Sep 2026 - Present

PHP – Personal Home Page

GitHub/PHP

Java · Spring Boot · PostgreSQL · Gradle · Docker · GitHub Actions · JUnit · Testcontainers

I was always looking for a good application to organise my non-technical TODOs. When I needed a project for school, I decided to build my own homepage where I could also keep track of my TODOs. The application is built with Java and Spring Boot, following Clean Architecture principles. The different layers are split into separate Gradle modules. I also set up an extensive CI/CD configuration, including unit and integration tests, Codecov, SonarQube and automatic publishing of Docker images.
This project is far from finished, but it keeps reminding me why I enjoy working with Java so much.

Apr 2026 - Present

Picture Project Maintenance Tool

GitHub/Photography

C# · .NET · ASP.NET Core · Razor Pages · PostgreSQL · NUnit · Moq

As a photographer, I often spend a lot of time organising and selecting photos. That's why I started developing a tool to simplify and improve this process.
By using a layered architecture, I was able to create a separate CLI and website that share the same application logic.
The tool recognises photography projects and can search, select and copy images. It also speeds up importing photos from my camera considerably.
The project is still very much in development, and I plan to keep working on it over the coming months.

2021 - 2023

Together Java – TJ-Bot

GitHub/TJ-Bot

Java · Gradle · JDA · JUnit · Git · GitHub

TJ-Bot is an open-source Discord bot for the Together Java community. One of the project's goals is to help newer programmers gain experience with collaboration and Git.
I actively contributed to the project for around two years, merging dozens of pull requests and reviewing over a hundred.
This project greatly improved my knowledge of Git, code reviews and working together with other developers.

Mar 2022 - Aug 2023

Hayame

GitHub/Hayame

Java · Gradle · MariaDB · HikariCP · Flyway · Prometheus · Grafana

Hayame is a Discord bot I developed myself in Java. The project uses multiple Gradle modules, along with MariaDB and HikariCP, combined with Flyway for database migrations.
I also integrated Prometheus and Grafana to track statistics from the bot. On startup, the required dashboards were configured automatically, provided the software was installed.
This project gave me a lot of experience with database management and monitoring different systems.
